Integrity Statement

We might use Generative AI tools, such as ChatGPT, in a limited capacity for our project. That includes generating project setup, helping debugging/testing code, and document code (after verifying).

We understand AI's limitations, including potential errors, and will not use it for critical system design or architecture, final art assets or interface design, and writing any core functions without thoroughly understanding and testing them.

All project code will be reviewed and is ultimately our responsibility to understand and comprehend. We will only use publicly available open-source libraries and frameworks. We will be ready at any time to discuss and explain anything we submit for our capstone project.
